(54) Title: METHOD AND SYSTEM FOR ORGANIZING CONTENT ON A TIME AXIS

(57) Abstract: A method and system are provided for organizing content on a spiral time axis. Content is organized on the spiral axis, for example, based on the creation date or reception time of the corresponding content. More recent content can be positioned, for example, towards the outside of the spiral while older content is positioned towards the inside of the spiral. Properties of the content representation can optionally be specified to convey additional information about the content. An efficient means for responding to communications from other friends and family members is also provided.
